RECOMMENDATIONS

Assemble the product with Teflon or Sealant (do not use Hemp: its use automatically invalidates the product's guarantee). Always check carefully all the products in order to be sure of their correct assembling and to be sure that they do not bear any visible defect. We recommend to use only the suitable tools and to avoid exercising a too harsh tightening strength. In addition to this, be sure not to leave o-rings and gaskets under the direct sunlight because it may damage them.
