

Article: 1268USCI32

Description: Double connection for two w.m. or w.m./dryer - SMOOTH CONNECTION Ø32.

Material: PP + thermoplastic rubber

Working temperature: -5°C / +90°C

Article net weight: 62 g ± 5%

Origin: made in Italy all by Go Plast.

Packing: single plastic bag.
50 pcs in box 60x40x20.

Packaging gross weight: 4 kg ± 5%

Codice EAN:

Our standard products are designed for the connection of two washing machines, or a washing machine and a dryer/condensate drain. By condensate drain we mainly refer to that of the boilers, in fact it happens that the washing machine and boiler are in the same room.

All our products for double connection are equipped with anti-return valves.
The valves are essential for safeguarding the possible backflow of exhaust towards the other appliance/boiler.

Let's take an example by connecting a washing machine and a boiler exhaust:

if now the drain to which the two pipes remain connected becomes blocked or slow, the waste water pumped by the washing machine would flow back into the boiler, damaging it irreparably. The same goes for the simultaneous connection of a washing machine and dryer.

In the case of a washing machine, the anti-return valves become less essential, but it is still very useful to avoid backflow from one appliance to another. Probably in this case they would not be ruined, but hygiene would be compromised.
